### PROGRESS REPORT FOR 1952 3

#### A. Summary for 1953 and Objectives for 1954

1. Brief Highlights of Actual Progress During 1953

NSCID-16 provided FDD with a charter for its exploitation of foreign-language publications and coordination of translation activities. As a result Chief, FDD, heads an implementation subcommittee for "Exploitation of Foreign-Language Publications" of which 16 meetings have been held during the year. Munsatisfactory at the start of 1953 the abstracting of covert documents by FDD was subject to study and cooperation with ORR, OCD, OCI, and the hard Area. While no agency-wide cure for the deficiencies this processing FDD took measures to streamline its operation with the result that in the course of the year it was handland twice as many CSDB enclosures on the average per month as were processed during 1952.

A nation-wide survey of US repositories of Chinese Communist information on Chinese economy and science was conducted by FDD in an initial move to correct ONE's Intelligence Defactencies Reflect in SE-27". This survey resulted in a Planta and desired material into the division of from which bibliographies were prepared, monographs were exploited, and many articles in Chinese Communist economic periodicals were indexed.

Also, in furtherance of this program captured Japanese documents were used for supplementary information on China.

Seminars and briefings for ORR and other CIA office personnel and for FDD recovered were continued as a correct from 1952 to further the plan that the requirements of the consumers and the capacity of FDD to meet such requirements would be better understood for the effective promotion of operations and service. Operational liaison between counterparts of office.

FDD, CIA, and other IAC consumers resulted in more expedious and effecient servicing of the requesters and economical operation on the part of FDD.

The FDD Linguist Consultations Service rapidly developed its contact with offices in area and during the year processed

6,675 cases for ORR, OSI, OCD, OO, and other offices to which it was available. Minor requirements against FDD were resolved "on the spot" with no delay coccasioned by transmittal and paper-work proceedures and attendant GIB liaison which previously had constituted unwarnted detail and expense.

**ILLEGIB** 

Increased operational liaison assisted materially in the

refinement of exploitation techniques as opposed to translations service. Increased confidence on the part of consumers in FDD's abiliinitio du ties, evidenced during later 1952, markly increased during 1953 with the result that a much larger number of requirements requested exploitation as opposed to translation and the increased guide requirements. The subthe Exploitation of publications committee on foreign language exploitation was proving to be contributory for better planning in this field.

Increased operational liaison, the availablity of the Linguists Consultation Service, and closser control sof all translation service requirements, resulted in greater expedition in satisfying translation service requests. Complaints regarding translations service by FDD materially and featimental to decreased during the year, and restinant to this effect is in the reduction of translations service back log from 550 at the 1 January 1953 to 284 on hand 31 December 1953. In all, Table 79,481 pages translations service were received during the year; 83,369 pages were completed; 20,814 pages addressed to the division were canceled mainly because they duplicated work previously done or en accoming proved to be of little value, and 11,045 pages were on hand as a back log going into 1954. Of the translation load, approximately 2,000 pages were in reversed translation from English into a foreign language) and the division also participated more then ever before in the translation/interpretation of foreign languages either from sound tapes, and recordings ser directly or from motion pictures falm

25X1A

The training programs of the division followed the 1953 plan for of the divisions personnel engaged in such training the precedding year. The fields of training programs, as compared to

engaged in by the divisions personnel included its prime requisite language training, as well as international studies, basic intelligence, human resources, clerical work and management, and in 25X1A nishing instruction for CIA personnel in and Rumanian.

Formal training and work experience developed within FDD a group which is qualified for interpretive propaganda analysis, Two research aids were produced from this staff, operation, during the lack of budgetary funds for 1954 required the dissemination of this staff, except for the coordinator, before this operation was really under way, under requirement of ONE, OCI, and DD(P) the propaganda analysis operation is continuing on an add hock basis

The planned expansion of the consolidated translations survey and with sunsiderable success.

its index was effected, this operation boild placed in the hands of

A unit composed of experienced personnel, Cooperation extended e of Contact Division and anti-liaison among the government agencies provided for additional listings of translations completed and process to augment those previously supplied all most exclusively by the cooperating IAC offices. The CTS was listed during the year an average of more than 1,000 items per month in its publication. alone 's its records alone, discounting any duplications \*\*\* presented through the consumers recourse to the publication, the CTS Unit prevented 506 items of duplication which would have totaled 16,716 page 5.

During the year FDD received and processed 241,628 foreign language publications. This represented approximately 6,040,300 pages of foreignlanguage materials scanned for the divisions production. All though publications procurement and control passed outs of the priview of the division in mid-summer, the divisions cooperation in this field is continuing, especially in view of the requirement for foreign-language personnel, to advise in procurement problems and the eights in difficult languages.

S-E-C-R-E-T

**ILLEGIB** 

25X1A

25X1A

AZ

Recruitment was so successful during 1953 that FDD ended the year with one over the ceiling allowed by the personnel revision of 1 July.

25X1A

Of actions initiated by the division during the year, reported for duty, and there were actions on hand at the end of 1953. It was the first time that FDD had recruited to the limit of its allowed ceiling or 7/0.

Reorganization for greater operational support, in the form of

the merger of two branches into the Western World Branch was another tenta
tive accomplishment of the division. Placed on an experimental basis

in October. The new organization embracese all Western World Areas out
side the Iron Curtain, excluding the oriental. Western Warld Branch operates under

direct orientation of its operations for information pertaining to the

Soviet Orbit, and provides for a great flugity in the adaptation of per
sonnel to requirements, against the divisions language potential.

Participation of the division in the CIA Records Management Program was also note worthy during the year of its initiation, in that its awareness of filing techniques and requirements and participation in the vital materials program were at appearing. The effort toward reduction of classified storage space paid off with the division turning for release 28 file cabinets or safes for select to.

2. Major Divisional Problems

Of the FDD objectives for 1953 only a few are carried over into 1954 as continuing problems.

While the divisions previous primary concern in the procurement of foreign-language publications was transferred to CIA Library, FDD's interest continues in the development of cooperation with the new Foreign

of foreign-language publications.

The climination of delays in the dissemination of FDD reports was another which haunted the division at the start of 1953, and for which there was no noticeable correction during the year. Through conferences and cooperation with OCD attempts were made by FDD to help cut this time lag from two weeks, but as of 31 December 1953 no noticeable improvement had affected. It appears doubtful that FDD can assist further in any way to accelerate the dissemination of its reports.

Refinement of reporting techniques is still in a development stage and continues as a problem until all consuming offices and agencies can be satisfied as to content and form. The subcommittee on exploitation of foreign language publications has developed that there are strong demands for information published in index file form and it appears acceptable that a considerable amount of the information provided by FDD is adaptable to such reporting. However, a suitable CIA duplimate form must be devised to provide for required reproduction of such material.

Another 1953 objective, only partially realized and continuing as a problem, was that of additional publication and dissemination of FDD the reports with the reduction of issuance of unpublished reports. FDD published more than 2,000 more pages in 1953 then it did the previous year, but also issued more than 22,000 pages of unpublished reports over the total of 1952. The criteria by which material is selected for unpublished issuance are being re-examined and a study is being made of editorial and publication proceedures, plus typing capabilities, in respect to possible increases.

An indication that dissemination is more preferable in a large number of the now-issued U-reports is received directly from OCD regarding requests to for extra copy of "U reports" and in the requests for reclassification of such reports, which were least as restricted prior to the presidential order on classification of 15 December 1953

Requirements for additional reports in the Propaganda Analysis
field roses and additional problem for the division. The dissemination
of the Propaganda Analysis Staff as a result of the budget crack down
in 1953 presents another carry-over problem from a relative success in as
a 1953 objective of FDD. Experiences show that it is poorly conceived
to depend upon part-time exploitation for furnishing description of propaganda for interpret Propaganda analysis. The divisions only recourse, if the division of the division of the propaganda analysis are divisions only recourse, if the division of the division of the propaganda analysis are divisions only recourse, if the division of the propaganda analysis effort the to reply to such requirements, as may received.

Although much of the previous dissatisfaction in translations service was eliminated during 1953, operations in this category will continue to be a problem to FDD. Restrictions on division personnel and limitation of funds for contract translation finds consumer dissatisfaction in the factor of funds for contract translation finds consumer dissatisfaction in the factor of material for both classified and unclassified material has been necessary, and in regard the contract service, the allocation of service available translated to the factor of funds for the 1954 resulted in a decrease of over time, which was formerly a major item of support in meeting many of the demands for classified translation, Only through the enter-divisional transfer of funds within the Office of Operations was

3. Additional Objectives for 1953

Outstanding objectives for the coming year requiring FDD action appear as follows:

exploitation of foreign-language publications, through decussions in

the subcommittee or exploitation of foreign-language publications.

Application of greater effort in an endeavor to achieve the closest coordination of activities in other government agencies envolved in the
exploitation of foreign-language publications.

Develop and maintain closer working-level liaison with each of the consumer offices and/or agencies.

- b. Further reduct the back log of translations service and increase in the speed of the handling at translations service requests.
- £. Detailed examination of guide requirements with a view to eliminate as many as possible in favor of specific requirements from consumer offices.
- Speed up the processing of material and production of reports where the form the date of receipt of the foreign language publications to that of dissemination of here to.
  - dissemination. of high to.

    G. Develop specific reference such as anotated bibliographies or abstracts of publications regently required by consuming offices.
  - H. Continue the development of the CTS operation both by expansion and increase coordination with similar operations outside the IAC. And projection this operation for eventual adoption of machine-record methods.
  - Continua language training for employees so as to expand their individual language protentials thus increase the over-all capabilities of the division.

<u>S-E-C-R-E-T</u>

#### B. Organizational Progress Changes

1. Over all Divisional Development

The experimental reorganization of The Western Branch and the Near East/Africa Branch was an outstanding organizational change in the division during 1953. The merger of these two branches into the Western World Branch on 1 October was designed to accomplish (1) the creation of a unit capable of a higher degree of exploitation for information on the Soviet Orbit's intentions and protentials as revealed in the free worlds newspapers, are periodicale, and monographs, and (2) to provide a unit with more effective flexability for operational support of all FDD's branches concentrating on the USSR and Orbit.

The exploitation of Wzbek, Turkistan, Tatar, Azerosijani, and Armenian Publications was transferred from the former Near East/Africa area to the USSR Branch in order to provide more proficient supervision of the responsibilities covered in the areas of these languages. The Finnish section, previously with the Eastern Europe Branch, was embraced in the new Western World Branch for the same reason.

Sections which previously covered the West German, Austria, Scandinavia, France, Benglux, and Africa, were reorganized into three main sections covering the Germanic States, French States, and Latin States.

Latin States Section

The latters operation involves the exploitation of Latin American newspapers on the basis of specific requirements from the DD(P) area, and from G-2.

While not ignoring entirely the intelligence information on the free world, the recognized branch is aim a descript quirements for such information, the reorganized branch is aim a descript for information on the Soviet Orbit, as revealed from the press of the free world, areas. This may involve alegal and illegal East-West trade information, activities and organization of National Communist Parties, forthcoming and current international conferences and fairs, official source traveling between the free world and the source orbit, and activities in Scientific and Technological Research and Developments, in the free world.

With the devorce of the Documents Control Branch, from FDD on 11 August 1953, with its functions transferred to OCD, the division was required H's com ermediary for close screening of new material received into the division since this function could no  $\vec{\lambda}$ lenger be carried out by the new Foreign Branch, CIA Library, which was Uses charged with the responsibility of providing FDD with the raw material for its operations. To this end a Screening Section was established in Reports Branch, This section consists of 25X1A all of which, except a clerical post, are occupied by multilinguists. Neur East/Africa - Western Europe Other than that required for emplimenting the merger, above, there was little reorganization within the area branches, except as required to meet operational requirements. The budget and ceiling restrictions empossed by the budget for fiscal 1954 required the dis persal of the propaganda analysis staff on 19 August. The coordinator for propaganda analysis was retained in this position but other personnel of this staff were reassigned to area branches. propaganda analysis with experienced on an add hock basis with experienced personnel drafted from the area branches as requirred. 2. Headquarters Organization and Activities 25X1A on duty in the division As of 31 December 1953 there were 25X1A 25X1A against a ceiling of On 1 January 1953, the T/O was with a ceil-25X1A this being increased on 14 January 1953 to The 1 July budget restrictions resulted in a freezing of FDD's T/O at the number of persons on duty as of 30 June 1953. The Climination of the Documents Control Branch in August resulted in a transfer of 13 positions of and a drop the ceiling this unit to OCD, reducing the FDD T/O to 25X1A Successful Vecruiting was one of the features of 1953, it being the most successful for the division in \$ this field of activity. At the start of the year, FDD had actions in process and during the year 25X1A 25X1A additional actions were instituted. Of the actions, were dissapproved security, canceled by personnel or 25X1A

25X1A declined appointment. There were actions in process at the star against 25X1A ₩ close of 1953. 25X1A In all, the year showed gains for FDD personnel wise 25X1A 25X1A The gain showed an average of per month and losses averaged 25X1A Of the losses were resignations, one was by death, and trans-25X1A ferred to other offices of CIA. The FDD over time program, by which much of the argent franslations service Requirements were met, was another feature of operation some what curtailed by the limitation of FY 1954 budget, funds. For several pay periods the over time schedule was canceled so as to permit funds for permotion of deserving personnel. However, with a transfer of 27,500 to FDD, over time was resummed 25X1A dollar Back\*Ih\*the\*program\*was\*heeded\*to\*the\*end\*of\*I9 The available funds now provide for an allowable per period over time allocation of 900 hours period. An average of 993 hours per pay period was worked by the division during 1953 as compared to between % 1,500 hours per pay period during 1952. Participation of FDD personnel in the training programs of CIA 25X1A and the division more than doubled that of 1950. Around f the divisions personnel engaged in these training programs as compared to 25X1A involved in such participation of the previous year training covered numerous fields during 1953. Primarily the divisions prime objective in advanced language of rare languages. However, parallel educa-**ILLEGIB** 25X1A tion for the divisions intelligence officers drew students to 25X1A the CIA Basic Intelligence Course, World Area Seminar provided through the agency, Clerical and Management Courses, and the agencies Human Resources Program. The division was lest h its own part in the instruction inon its come Nine trainees participated in the FDD Chinese Language Program and six in the Russian Program. An FDD expert

instructed personnel of the covert services in an intensive

Language Course and other division linguists tutored ORR officers

in Rumanian. All clerical personnel received into the division were
given A weeks introductory training in proceedure amplement in FDD, and
25X1A

20 FDD personnel completed a division Reports Writing Course.

FDD supervisors participated in the OTR Human Resources Program, and Fixe

completed the agencies Records Management Course.

Inaddition to such formal training, ten FOD analysts engaged in field trips to industrial plants to become furnitionized with technical processes by close observation

25X1A

Security violations during 1953 totaled as compared to luring 1952.

Comme with the reclassification of personnel effected the inverse before in the linguists and clerical catagories, on 30 April 1953

25X1Athe Classification and Wage Division approved the reclassification of positions ranging proposed revision of grades from GS-3 to-4 to GS-12 to-15. Several other positions, mainly clerical, were reclassified in the course of the year, and on 11 August positions of the Sereening Section, involving grades from GS-4 to GS-12, were approved to man the new Screening Section.

With the transfer of functions of the Document Control Branch to the new Foreign Branch, CIA Library, 5165 square feet, the second was transferred to OCD to house the new operation.

To partially off set this loss of space, one room formerly used as unclassified pool space was converted to classified use, amounting to 830 square feet.

Air conditioning was installed throughout the entire FDD area morale in the course of the year, contributing to the moral and the operational efficiency of the organization.

#### C. Functional Progress in Collection

#### 1. Source Coverage

Resort to numerous and varied overt sources for procurement of Foreign Language Publications failed to fill numerous gaps in source material prevalent for several years. Certain publications of the technical and trade-journal type restricted by the Soviet Union from explicite tien were still unavailable. In the course of the year Rumanian and Hungarian official bulletins were banned from export for the first time, thus Climinating sources for reports on official laws and decrees of those

25X1A

25X1A

livery of material from that area. Delays in receipts of publications 25X1A from some areas continued, although the amount of material received via air mail increased during 1953. Covert sources were resorted to for

certain Near East Fublications.

In spite of restrictions on certain scientific and technical periodicals from the USSR, FDD received Soviet Scientific Feriodicals 25X1A regularly in 1953 as compared to titles <del>received</del> in 1952. In addi-25X1A tion, a large volume of Soviet books, monographs, and nonperiodic serials in the scientific and technical fields were received. Coverage was also augmented by the receipt of more then titles of scientific periodicals from the Satellites States.

The divisions successful efforts to discover available Chinese Communist literature, especially in the field of economic and science, have been described above. With arrangements completed for Current repairing additional acquisition of such material by

25X1A

in the United States a guaranteed flow of books and monographs in these catagories is more or less assurred.

Direct responsibility in the procurement field was removed from FDD with the transfer of Documents Control Branch to the CIA Library, negotiations and planning for which started as early as 1 April. The source coverage in the future will be carried on through FDD's direct liaison with Foreign Branch through the divisions Screening Section. With the Screening Section, and the particular area sections concerned responsible for advising Foreign Branch concerning the gaps in source material and exceptional delays in receipt of material from the the transfer publication.

# 2. Exploitation Coverage

In response to ONE's "Intelligence Deficiencies Revealed in SE-27",

FDD accented efforts to provide the needed information on Chinese economy

25X1A

and science. A survey was completed of US repositories holding Chinese

To expand the divisions language ability, new Chinese Linguists were trained through the divisions Language Training Program and language training for A persons in Viet-Namese in Burmese increased the ability confidence of the division to cover the southeast Asia area.

 $\underline{S}-\underline{E}-\underline{C}-\underline{R}-\underline{E}-\underline{T}$ 

In the Near East area coverage of Indian newspapers was expanded to the regular exploitation of 14 Hindi, 3 Bengali, and 13 Urdu newspapers. In this area too, language training was completed by in Persian, in Urdu, in Hindi, in Bengali, in Arabic, and in Africans.

In some areas exploitation proceedures were streamlined through use of recording tapes the encouragement of CIA analysts to spot-review publications for precise information. This trend is the best use of FDD capabilities and the elimination of much waste effort and misunderstanding.

In response to a consummer demand led by OCI, monthly compilations on Soviet leading personalities were discontinued in favor of dissemina-reproduced tile conds, tion on fine blade eart file for use by CCL Department of State, the DDP) area, and others. In the the the transfer of the transfer In the scientific field numerous compilations of condensed information were produced in close support of specific intelligence projects. Continued emphysis was placed a upon the production of periodical abstracts as the vehicle for broad coverage. Only by this means was it possible to increase the coverage of Soviet Periodicals, This being done at the cost of production of information reports or more complete exploitation. The production of collated information reports in the scientific field actually decreased during the year in the faces demands for the periodical abstract type of filable information and in the face of an increase  $^{0}$  translation service load. For scientific Soviet books and monographs, only token exploitation was possible on a limited scale specifically by use of the table-of-contents method suplimented by brief descriptive texts a gap also continued in the production of information from Soviet Orbit Scientific Publications owing to a derth of personnel.for

External contract translations supplied to some extent the demand for complete translations in specific fields. as required. In all the unclassified contract translations service accounted for 50,31 pages during the callendar year of 1953.

# 2. Divisional Information Out Jut

FDD produced 165,513 pages of reports of all types during 1953. This was a considerable increase over the 135,843 pages produced by the division the previous year. Continuing the comparison of this total 39,578 pages were in reports published and disseminated, as compared to 37,440 pages published in 1952.

The unpublished report method was reserved to increasingly during 1953 in order to limit dissemination for exclusive use, to better meet target dates or project dead lines by circumventing the time-consumment

for 64,843 pages during the year as compared to 42,707 pages of such reports the previous year. The remaining 61,092 pages represent the divisions production in exclusive reports for in response to requirements of the covert offices, and in response to special requirements for cardfiled information on biographic catagories and for graphics registre. There were also as well as 2,296 pages produced in abstracting of enclosures to covert reports.

Again, the greatest volume of reports were filed in the economic catagory, 72,040 pages being for 1953 as compared to 45,926 pages in 1952, while scientific subjects commanded the second largest total for both years at 33,066 for 1953 a small sucrease such the 31,699 scientific pages issued in 1952.

Averaging approximately 116 pages per issue, the consolidated translations survey plot its supplement For U.S. Officials Only, were regularly issued monthly. Coverage by the Consolidated Translation Survey reached a distribution process of 278 customers during 1953, the listings per issue averaging more than 1,000 items. Expansion was affected for additional listings through cooperation of the contact Division in mengovernmental field and through direct liaison with outside lac government agencies.

As production of the Propaganda Analysis Staff, the division function published Research Aids. was the "Sino-Soviet Friendship Month Propaganda", and "Chinese and Soviet Views on Mao as a Marxist System Theorist and on the Significance of the Chinese Revolution for the Asian Revolutionary Movement." The division also published its first reference aid, "A glossary of Chinese Characters for Certain Place Names in Burma." Another extra publication was "Special Italian Accessions." A special report, with limited distribution, was also produced by the division on "Free World Press Reactions to the Soviet H-bomb."

A prime objective of the division starting 1953, inspired by complaints from CIA offices and the State and Defense Departments, was

the diffimination to some entent of delays in dissemination of the divisions published reports. Through conferences and cooperation with OCD it was attempted by FDD to this time lag into dissemination from the A weeks which elasted between completed preparation in the division and dissemination of the reports. This delay was the cause to a considerable extent resort to increased issuance of unpublished reports. In order to meet the time demands by analysts requirring information in certain categories. FDD conceeded to an OCD request for carbon copies of each report prepared on duplimat so as to split the time requirred for analysis in Liaison Division, OCD. However, at about this time OCD took on another obligation for the provision of the Intelligence Subject-Area Code Index on each report. It is possible that this additional chore millitated against any improvement in the time of processing the FDD reports through Analysis Branch. The The time lag in dissemination still stood at approximately weeks at the close of this year.

#### 3. Requirements and Priorities

At the start of 1953 FDD had 793 requirements on hand while at the close of business 31 December 1953 there were a total of 613 requirements against the division. Of the total on 1 January 1953,550 of the 793 were for translations service. The expedition of the translations service by the division during the year had decreased this load in back log to 284 translations service requirements against the division as of the end of the year. Increases in exploitation requirements, however, were noteworthy, at the start of 1953 there were 76 specific requirements against the division while the close of the year found a total of 149 such requirements, Guide requirements increased also, from a 167 at the start of the year to 180 on 31 December.

where to 180 on 31 December.

A the last of the last of the last of the division as compared to 2,412 received during 1952, and of continuing the comparison completions were 2,606 in 53 against 2,105 in 52, with respective cancelations at 379 and 219. The enter office liaison, initiated by FDD more than a year ago, continued to show successful and satisfactory results.

## $\underline{\mathtt{S}} \text{-}\underline{\mathtt{E}} \text{-}\underline{\mathtt{C}} \text{-}\underline{\mathtt{R}} \text{-}\underline{\mathtt{E}} \text{-}\underline{\mathtt{T}}$

Briefings of groups from consummer offices was continued to a large extent an individual liaison and conferences, and seminars on both specific projects and for general information of FDD capabilities as compared to the needs of the consummer offices, were held periodically and sporadically. The trend for increased exploitation requirements continued and to siderable extent is responsible for the large decrease in translations.

through interession of PP/DD(P), two requirements love bear accines from the US he forms took

### $\underline{\mathtt{S}} - \underline{\mathtt{E}} - \underline{\mathtt{C}} - \underline{\mathtt{R}} - \underline{\mathtt{E}} - \underline{\mathtt{T}}$

#### 4. Consummer Reactions and Evaluations

Foreign Documents Division received upwards of 50 secommendations and letters of appreciation from CIA officers and IAC agencies served during the year. Some of the more outstanding were as follows:

From the Assistant Director for National Estimates, the FDD research aid "Chinese and Soviet views on Man as a marxists theorists and on the significance of the Chinese Revolution for the Asian Revolutionary movement." With this was a request for a supplemental report on "Man's trend since the death of Stalin."

From the Assistant Director for Current Intelligence, the same report and embodying a similar request.

25X1A

From the Assistant Director for Research and Reports, for FDD's participation in exploitation project which made available to ORR analysts invaluable statistical data on China and Manchuria.

From Rear Admiral Carl F. Espe, Director of Naval Intelligence, for FDD's translation into 17 foreign languages (many of which were in the rare language category) the text for the Pointee-Talkee Booklets issued in survival kits for Air Graft Filots.

From The White House for translations service on personal papers 25X1A of the President.

From the office of Naval Intelligence, for selected translations

25X1A

From the Assistant Director for Current Intelligence, for the special FDD project on the Soviet Party, Government, Millitary Personalities Mentioned in Newspapers, and Periodicals, in \$ relation to an analysis of a possible successor to Stalin. 25X1A

From the Naval Intelligence for several FDD reports on waters.

From the Acting Director of the Office of Libraries and Intelligence Acquisition, Department of State, for FDD \*\*\*\* Services in supplying information on the Near East, South Asia, and Africa.

From the Office of Naval Intelligence for the translation of a short speech from the Marshallese Language.

From the Department of State, for FDD reports concerning details on Chinese Communist propaganda operations among the masses.

From the Assistant Director for Research and Reports for FDD's long service and detailed understanding of requirements for transportation information needed by the Economic Services Division/RR.

From the Director **S** of Training for FDD instruction of CIA personnel in the

The many other written evidences of appreciation and for commodation of FDD individuals and the division operation as a whole have been received for extensive interpretation work sound tapes and from moving picture film; for services of individuals in aiding in the quick scanning of documents; for the expedicious reply to requirements and the meeting of target dates, and for specialized reverse translation work.

Evaluations are received by Foreign Documents Division only upon specific requests in conjunction with certain projects or reports on which the originating language specialists require additional or supplementary quidance for future factor operations. Upon receipt of such evaluations the areas concerned take immediate action to comply with the Expension suggestions embodied in such Expension. No inventory is manifered of these reputies.

# D. Progress in Support Functions

#### 1. Changes

Increased liaison between operational counterparts, the increased development of the linguists consultation service, and the establishment of closer control of all translations service requirements/resulted in greater in expedition satisfying the agencies needs for translations service. The ICS, and liaison between FDD and the requesting offices resulted in greatly increased survice on a speedy and more informal basis. Many requirements

were converted into the more economical exploitation channel. Closer control of the formal requirements 👺 via monthly inventories for both classified and unclassified-contract translation services militated against unsatisfactory delays. Requirements against unobtainable documents, and those involving valueless information revealed from scanning, were canceled after reasonable time laspe, search, or scanning. - evidence of the dispatch with which translations service was handled in 1953 is shown in the comparative figures: 550 requests on hand 1 January 1953; 284 on hand 31 December 1953. The actual work back log as of the start of the year for translations service was 35,747 pages. There were 79,481 pages received during the 12 months, but as of 31 December 1953 the FDD back log for this service stood at only 11,045. To a greater degree then ever before, FDD was called upon for reverse translation (from English into foreign language). The Office of Communications, the Office of Training, and the DD(P) Area were princip requesters for this type of translation. In all approximately 2,000 pages of reversed translation were accomplished during the year.

The amount of translations/interpretation service performed by FDD linguists for the covert staffs and for graphics register increased materially in 1953. Requests for this type of service included that for direct interpreter work, transcribing from sound tapes or recordings, and interpretation of foreign newsreels.

Restrictions on the quantity of unclassified contract translation

was required at the beginning of the FY 1954, owing to the curtailment

Consumer officer estimates of punding of this

of funds, for this purpose in the general budgetary outlay. Result of this

was to force greater discrimination and control on the part of the requestoffices
ing the in selection of material for an antitude to this service. It

was necessary for FDD as the controlling office, to break down the estimated

requirements of the offices service by contract translators into monthly

allocations and to maintain strict control that such allocations were not

disregarded. While this service continued to be of great value to the agency,

personalities

Language instruction in Rumanian and for CIA personnel, and all examinations in Hungarian and Slevac/administered to DD(P) personnel.

The Korean version of the US-ROK defense pact was checked by FDD for the Department of State.

During the year Foreign Documents Division successfully proposed a revised regulation on transliteration and prepared in conjunction with this a new transliteration handbook.

To be consumer offices provide for clearer framing of requirements, Foreign Documents Division initiated a new form "Request for Information from Foreign Documents" for the use of requesters in framing all requirements against the division.

More than Chinese Conomic Periodical Articles were indexed for Reference Branch, CIA Library.

25X1A

Special operational service was performed for ONI in assisting its preparation of an

Another support function, the abstracting of CSDB enclosures of the covert offices nearly doubled in volume during 1953 as compared to totaling the previous year. There were 2,296 enclosures, totaling pages, from which abstracts were disseminated. In 1952 there were 1,256 enclosures, with a comprable number of abstracts resulting from a total of 27,684 foreign language pages.

More than articles in Chinese Communist Conomic Periodicals 25X1A were indexed for the intelofax system of CIA Library. In addition, anotated bibliographies of Chinese Communist Monographs were prepared and disseminated. At the request and in cooperation with BID, Department of State, OCI and other CIA offices, the FDD method of preparing bibliographic information on Soviet personalities was revised from monthly

compilations to a system of reproduceable card-file information.

On request, particularly from CIA offices, the consolidated translations survey unit made 85 subject surveys listing 6,558 appropriates items in support of special projects of the requesting offices.

In support of specific exploitation requirements, FDD issued 458 reports. Guide requirements against the division resulted in 5,069 reports.

The linguists consultation service processed 6,675 items during the year, which figure represents to some extent the side tracking of formal requirements against the division.

#### 2. Special Problems

Iack of control over source material and its procurement one of the outstanding special problems effecting FDD operations. Antiquated rules applying to the shipment of documentary material procurement fields over seas, and relating to library functions more than the collection of intelligence, delay the receipt of newspapers and periodicals to such an extent that the divisions "current" coverage can be effected only on required the basis of months delay. Consequently, with the time for exploitation added to that a for receipt the document after printing expires against the relation of documentary information to estual current needs. Until transmittal by air of most important publications, and priority shipment by sea can be assurred from the areas of procurement no answer to this problem is in view.

The increasing ideal for "total information" in the intelligence field is another problem facing FDD, and its methods. Some steps have been taken in this direction in the division through the user of the indexing and abstracting methods and the publishing of bibliographies. However dicussions progressing in the NSCID-16 subcommittee on the exploitation of Foreign-Language Publications are expected to resolve this question in respect to at least selected subjects and areas. An unexpectedly large demand for German translation constituted a serious work load for the division in this language category during the year. However, the available ability of personnel effecient in this language, through the multilingual capacity of the division has built up the preceeding year, say FDD able

to meet the requirements in this field satisfactor in a great number cutte.

25X1A

the divisions facilities. However, through the establishment of adequate priority, the application of the exploitation technique, and consistent operation against the back log this was reduced to reasonable proportions before the end of the year. Personnel limitations (restriction on recruiting and imposition of coiling) has left the division no all termathe tive; but refusal of important A-priority requirements. The exploitation needs as expressed by such offices as OCI, the DDP) area, OSI, in the course of the year, would have required a table of organization of between people. However, it was necessary to kill such content of the people. However, it was necessary to kill such content of the people in the course of the year, would have required a table of organization of the people. However, it was necessary to kill such content of the people in the people

25X1A

The problem of translations service delays, which continued into 1953, was to a large extent dispelled during the year through the use of adequate controls, suspense, a realistic attitude toward the availability of raw material, required, and a general sporring of the actual translation operation. It is satisfactory to report that as the year progressed fewer and fewer complaints regarding the expediting of translations service were received by the division and, on the contrary, evidences of appreciation were received from satisfied consumers.

service in the abstracting of CSDB enclosures. In early 1953, conferences among the interested offices of CIA regarding delays in the processing of such enclosures were held with FDD participating. The inadequacies under discussion did not reflect upon the FDD operation to any great extent, other then that appendix of enclosures was subject to increase if the material were completely serviced. While the discussions failed to eliminate transmittal delays and bottle neck routing FDD was able to so organize its abstracting operation that with streamlined methods, a nearly 100-percent increase in enclosures was processed. The average was about 200 per month. The problem of sufficient copies of abstracts for adequate and full dissemination continues, owing to the need for additional personnel in the publications area of FDD. if such were to be effected in

#### <u>S-E-C-R-E-T</u>

#### this division:

3. Collection Support Functions

Based on its production figures, FDD devoted approximately 38 percent of its effort to translations service and 62 percent to exploitation during 1953. CSDB abstracting was included as translations service. This percentage division of work load represents a percent increase in favor of translations service over the division evidenced in 1952. While the 1 to 2 balance in favor of exploitation is that prescribed for the division, strict control within such limitations is impossible even on a monthly basis. Dead\_line projects and other urgent requirements, and the variation of demands by areas, work against maintance of an accurate balance, but an annal it control problem Assasment of Division Operations

Extent of Accomplishment of 1953 Objectives

FDD's objectives as set down for 1953 were substantially achieved within the capabilities of the division.

A. The approval on 7 March 1953 by the National Security Council of NSCID-16 provided FDD with the long desired "Tharter" for its operations in the exploitation of foreign-language publications and the coordination of translation activities. The directive carried with its Fications applying to CIA Library/OCD for procurement of foreign language publications, their processing and cateloging.

Resultant were memoranda of instructions issued by the DD(I) on implementation of the NSCID-16. These involved establishment of subcommittees, of which Chief, FDD, headed that for "Exploitation of Foreign-Language Publications." Sixteen meeting of this committee were held during the year, with examinations completed on the USSR and China exploitation possibilities.

Implamentation of the directive also required reorganization within FDD upon transfer of its Documents Control become the Foreign Branch/CIA Library/CCD. This required the organ of a Screening Section within FDD to effect adequate selection of foreign

language materials received from Foreign Branch and to control for FDD their procurement and transmittal.

stracting by FDD came under study early in 1953, with ORR, OCD, OCI, and the DD(P) areas cooperating. Conferences designed to arrive at more satisfactory expedition of abstracting and/or exploitation of the enclosures to CSDB reports failed to develop an acceptable agency-wide system. However, revesion and refinement of processing within FDD enabled the division to handle an average of 200 documents/abstracts per month for the entire year for an actual total of 2,296 abstracts resulting from the processing of foreign-language pages submitted in the enclosures. 25X1A

in SE-27," FDD stressed efforts to provide the needed information on Chinese economy and science. A survey of US repositories to which Chinese Communist Documents are available on these subjects was completed by the

25X1A

25X1A

More than 500 anotated bibliographies of the monographs in these institutions were prepared by FDD and with priority cooperative screening by and FDD-ORR panal, about 50 monographs were exploited. In addition, articles in Chinese Communist Economic periodicals were indexed for the CIA Library intelofax system.

The expansion of this effort also delved into captured Japanese Documents to supplement the information on China. 5,000 statistical tables on Chinese economy were made available from this source

25X1A

25X1A

D. Seminars and briefings for ORR and FDD personnel were continued as a carry over from 1952 with the desired result that the ORR requirements and FDD's capacities are now better understood and more effective

 $\underline{S}-\underline{E}-\underline{C}-\underline{R}-\underline{E}-\underline{T}$ 

operations and service/have been promoted. Operation liaison between counterparts of both organizations resulted in more expedious and effecient serving of the requestors and more economical operation upon the part of FDD.

The research and exploitation against the "Efficiencies Revealed in SE-27" are evidence of the extent of cooperation developed during the year between FDD and ORR.

ing area by the FDD Linguists Consultations Service. More then 50 percent of the transactions accounted for by the LCS in 1953 were against ORR requirements. Located in the LCS was manned by a full-time chief, assisted on a rotation basis by one other multilinguists. Both on the staff of the LCS were expert in the languages more popularly required in servicing ORR, OSI, OCD, and the other offices to which the service was available. In all, the LCS processed 6,675 cases, of which 3,789 were for ORR, 1,138 for OSI, 1,122 for OCD, and 526 scattered. Through the LCS, the minor requirements of FDD clients were resolved "On the Spot" with no delays occassioned by transmittal and paper work proceedures and attendant liaison.

rechniques as opposed to translations service. Increased operational liaison led to much of this progress, together with the large number of briefings presented to CIA personnel on the FDD operation and its capabilities.

Increased confidence on the part of consumers in FDD abilities was evidenced in the framing of their requirements which called increasingly for exploitation for specific information and also by the issuance of the requesting offices of comprehensive guide requirements against targets for FDD exploitation of foreign publications. During the year, the division issued 458 reports against specific requirements and 5,069 reports in reply to guide instructions. The division also was recipient throughout the year of the agency's intelligence information requirements, general requests for specific information, for which the division was not responsible in

most cases for replies, but to which they were able to contribute excellent support.

The subcommittee on foreign language publications are explained proved to be contributory for better planning in this field. Methods to meet the requirements as developed in this committee were still under study going into 1954.

Included to a greater degree then previously, was reverse translation (from English into foreign languages), in which much work was done for the Offices of Communications and Training, and the DDP) Area. Also far greater then before FDD services were rendered in translations/interpretation required by covert staffs and translations register.

Analysis field, the division achieved training and work experence developed a group within FDD which is qualified in highly specialized work of Interpreter Propaganda Analysis. This was demonstrated in the Research Aids produced during the year. Study and experiment as fairly well demonstrated that support by the division personnel can be successfully utilized for descriptive Propaganda Analysis but, lacking concentration of application, tends to yield relatively poor results in

#### $\underline{\mathtt{S}}\underline{-}\underline{\mathtt{E}}\underline{-}\underline{\mathtt{C}}\underline{-}\underline{\mathtt{R}}\underline{-}\underline{\mathtt{E}}\underline{-}\underline{\mathtt{T}}$

the interpretive field.

The program was arbitrarily curtailed with the imposition of personnel ceilings and budgetery limitations requiring dissemination of the partially established staff that before this operation was fully under way. Reduced to only a coordinator on a full-time basis, additional production required of this operation was continuing with support of specialized personnel and drafted from FDD branches on an add hock basis.

As the year ended, that such a staff was active on requests of ONE, OCI, and DD(P) preparation of a third analysis.

 $\underline{S}-\underline{E}-\underline{C}-\underline{R}-\underline{E}-\underline{T}$

#### S-E-C-R-E-T

Legansion of the Consolidated Translation Survey Index and monthly publication proceeded as planned. With the permanent establishment of the CTS Unit, full-time operation of this facility was possible for the first time in the four years of its development.

Greater coverage was effected through new contacts in government and in private industries and institutions. Through Contact Division, 25X1A 141 translations were added to the index. Results of external translation projects conducted by the National Science Foundation are regularly processed. Liaison with the National Institutes of Health resulted in more effective listings from this source, and similar contact with the Scientific Translation Center, Library of Congress, developed regular receipt of bibliographies of translations from this source.

25X1A

25X1A

Cooperation of the participating IAC agencies increased during the year, with expanded liaison effected by the CTS Unit and requirements for service increased proportionately. There were 862 inquiries involving 2,384 items addressed from 14 offices during the year. Eighty-five subject surveys developed 6,558 appropriate items on request of IAC analysts. There were 1,377 requirements, involving 2,707 items, screened against the index. In all, 16,716 pages of duplication were prevented by reference to the index, representing a gross saving, at \$5 per page average, of \$83,580. Cases of duplication prevented by IAC reference to the monthly publication cannot be accounted for or estimated.

The Consolidated Translation Survey, issued monthly and listing translations in process as well as those completed, reached a distribution peak of 278 consumers during 1953, the listings averaging more than 1,000 items per month.

25X1A

j. During the year FDD received and processed Foreign Language Publications. This represented approximately 6,040,300 pages of foreign language material scanned for the divisions production.

With the Division's responsibility in procurement matters transferred to CIA Library shortly after the first quarter ended, one of the Division's major objectives for 1953, that of closer cooperation with other offices and agencies in procurement of foreign-language publications was no longer a specific requirement. However, with removal of the Documents branch from FDD, the Division organized a Screening Section, one mission of which is the coordination of procurement and subscription with the new Foreign Branch, CIA Library. Staffing and activation of this section on 10 July effectively bridged the gap between the new procurement arrangement and receipt of material by FDD.

In view of the budget curtailment and limitations of exploitation personnel, a prime objective of the new section was to re-examine all previous subscriptions before placing of Subscription orders before November 25X1A 1953. This resulted in a cut back to subscription orders placed by FDD for 1954 as compared to subscriptions ordered for 1953. In the 25X1A same catagory, the Screening Section also tock up a review of book purchase orders by the division, some of which were of more than two years standing. This resulted in reducing this listing against the budget to 456 items as compared to more than 800 standing against the division previous to the Screening Sections survey. During the months of its opera-25X1A tions thus far, Screening Section has processed unsolicited books and serials received from Foreign Branch, CIA Library. It was only during the last  $\hat{\boldsymbol{A}}$  months of the calendar year that books in any volume were received, of which a total of 857 were processed, from which burned back as of no interest to FDD. In the months be-25X1A and ginning July, 2,030 serial publications were processed by the section, of 25X1A were selected for division exploitation returned to Foreign Branch as of no immediate informational value.

S-E-C-R-E-T

was another objective of 1953 carried on with a success more than double that of 1952. Around of the divisions personnel engaged in training programs of all types. If these persons received instruction in 25X1A languages, as compared to in language training the previous year. Included in this training were a language training programs carried on by 25X1A FDD in Russian and Chinese. The division also assisted the agency in offering intensified instruction in the language and in Rumanian 25X1A for DD(P) personnel and ORR officers.

#### 2. Other Accomplishments

The tentative organization of the Western World Branch from the personnel of the former Near East/Africa Branch and the Western Europe Branch may develop as one of the major accomplishments of 1953 in FDD. The area-coverage reorganization, as set up within this new organization, is designed to effect a broader, if some what shallower, coverage of the entire world outside the Iron Curtain and target this coverage on information concerning the USSR, its satellites, including China. As compared to the former pen-pointed sectional organization of the two separate branches, this branch is now organized to cover areas of interest and particularly promises more efficiency in relating the language protential to such areas.

Project. Three months of this organizations existence have promised well for its permanent continuance after the six-months trial period is ended. The flugity with which this branch has been able to adapt its personnel to requirements against the division, and pen-point its exploitation efforts for information against the Soviet Bloc is already strongly indicative of its operational support protential in relation to the objectives of all other branches of the division.

#### <u>S-E-C-R-E-T</u>

25X1A

Another organizational or reorganizational accomplishment of the division was that of adapting to the removal of its Document Control Branch and its adoption of a Screening Section to the receiving process for the division's raw material. This in effect has streamlined the entire processing of foreign-language publications into the division, in that the subscription desired description and purchase material being on order of the division does not require preliminary screening and selection before it reaches the area branches. However, the large amount of material received outside of procurement and subscription orders, unciliated by FDD but subject to its screening and selection under order of the DD(I) can be \*\*\*\*\*handled by the trained linguists of the new Screening Section, of FDD, under consistent briefing of the areas served. and large amount of material having no intelligence informational value can be alliminated from the work load of the analysts on the operational floor. Further, subscription and purchase orders of the division can be closely coordinated and controlled to best maintain such requirements within the budget limitations. Another achievement of the division was in the recruitment field. For the first time in its history FDD was recruited to its T/O ceiling limitation as of the end of 1953. At the end of the year there were on duty against a re-25X1A vised/TO of and a ceiling of Also in the administrative field 25X1A was the accomplishment of reclassifications upward during the year, which brought the division to a well-graduated graded organization of status.

25X1A

#### 3. Major Deficiencies

One of the major deficiencies not immediately attributable to division operations, was the continued delay noted in the dissemination of published ) the FDD products. One of the objectives of 1953 had been to effect some improvement in the dissemination techniques used in other areas of the agency. Cooperation on the part of FDD, in executing to requests of OCD for extra carbon copies of reports, failed to bring about a noticeable difference in the elasped time between the materials departure from FDD and its receipt among consumers. This classed time stood at approximately but weeks at the start of the year and no change was noticeable as of 31 December 1953. Result of this was a necessity for the division to resort to advance copies (material furnished in draft form to specific requesters in advance of publication), and to increased use of the U-(unpublished) reporting system, the latter of which is unsatisfactory from a production basis and unsatisfactory from the dessirability of having a considerable amount of the division's products reach the most consumers.

At the same time, the U-reporting system increasingly added an additional chore to the division's records and transmittal operations. It was one of the objectives of the division to reduce the number of U reports in favor of increased dissemination during the year. However, while publication was increased by more than 2,000 pages, U reporting increased by pages. Efforts were to be initiated early in 1954 in an attempt to more streamline FDD Editorial and Fublication proceedures to the end of reducing the processing time within the division in order to compensate for the last of expeditious dissemination proceedures.

Time lag in the transmittal of foreign-language publications from their area of procurement to Washington and FDD was another major deficiency, more or less outside the ability of FDD to correct. Greater procurement authorities to the end that priorities may be substantiated for air transmittal and sea shipment of desgirable documents for the maintainance of current coverage by FDD.

 $\underline{S}-\underline{E}-\underline{C}-\underline{R}-\underline{E}-\underline{T}$ 

Suggestions and other cooperation to this effect may be made through the subcommittee on procurement of the NSCID-16. With the announced restriction of exportation of certain Soviet newspapers and periodicals facing the United States in 1954 expedious methods for securring the despired

25X1A

The coordination of the FDD operations with the Air Intelligence Division (Treasure Island) at the Library of Congress AID has increasingly been operating in the field formerly exclusively exploited by FDD, and regardless of the entries received through Air Force A-2 there is a strong probability of duplication of efforts at the expense of both organizations. It is dessirable that liaison be so effected between the two organizations on a classified basis that AID would century FDD/CTS through aprice that organizations upon the initiation of a new translation project or to inquire if such project is in protein in any other organization field.

A move toward this are end will be made early in 1954.

Outstanding among the deficiencies faced by FDD, as well as other government agencies of course, was the budgetary cleah effected by Congress funds in respect to the for fiscal year 1954. The imposition of a ceiling on personnel recruitment at a time when the division was at its peak of success in recruiting decided and required personnel constituted a blow against the planned development of the division in the face of outstanding and anticipated requirements. New measures were required in 1953 to find the required translations service on the basis of priorities established either at the requirements inacption or through liaison. Planned exploitation expansion was curtailed with the staff again persuaing studies as to how to effect broader coverage of their areas and subjects in view of a lack of decired personnel. Some steps were taken along these lines in the provision of information in card-file form, and the results of studies by the subcommittee on exploitation may develop other techniques of reporting

satisfactory or more despirable those of the present to the majority

service in the unclassified-contract field. This was especially unfortunate for the division which at the turn of the fiscal year had built up a dependency by the requesting offices for increasing amounts of material wank. This could be handled in this fashion and without handled in the general division operation of the division. In the face of personnel limitation this additional curtailment of translation ficility acted as a double discount to any planned expansion of translations service for CIA or the IAC. Result was a close study of unclassified translation requirements with the result discount field translation of considerable questionable material, but also with the cancellation of much material which would be of considerable value in the form of basic reference material for intelligence information.

 $\underline{S}-\underline{E}-\underline{C}-\underline{R}-\underline{E}-\underline{T}$ 

#### F. Objectives for 1954

- 1. Short-term Objectives and Aims
- with each of the consumer offices or agencies. Counter part analysts of FDD and the offices served by the division can, by more intimate contact, the contact of the consumer offices are effectively develope the subjects and projects in which they are interested and engaged in simultaneously. FDD personnel had thus far developed well in this field but continued accent in this respect is necessary until mutual conferences and briefings on needs and capabilities are recognized at operational necessities.
- Further reduction in the back log of translations service and a greater speed-up in the handling of translations service requests. This can be accomplished along the lines initiated in 1953 with increased resort to operational liaison, use of the Linguists Consultations Service, continued close control and suspense on requirements, and a greater selectivity of translations service requirements for acceptance by FDD.
- eliminate as many as possible in favor of specific requirements. A study of the guide requirements will reveal that a large majority of these over lap in their demands for similar information and, with FDD personnel capabilities limited such requirements might more efficiently be broken down to specific requests for information against projects of immediate concern. In this way the effort of the division would be more parapointed and the products of the division would go to a definite and timely use.

  Most efficient use of the specific requirements system, replacing the guide requirements, would demand that such specific requirements be coordinated among other offices of similar interest to the end that information requested by one office might be expanded in its exploitation to the service of all.
- D. Speed up the handling of material from the date of receipt of the foreign-language publication to the time of dissemination. This will

<u>S-E-C-R-E-T</u>

#### <u>S-E-C-R-E-T</u>

require and emphasized study and survey of the FDD reporting system to

effect revisions in styles and foremats and the streamlining of editorial

and publications processing. This should increase the quantity of information disseminated while conversely decreasing the amount of unpublished
reports issued by the division. Further study and honest attempt
enough be made in the area of dissemination to eliminate processing bottle—
necks in favor of moving the reports more expediously to the consumer.

L. Continue language training for FDD employees so as to expand their individual language potentials and thus increase the over-all capabilities of the division. In view of T/O limitations and restrictions on recruitment this method necessary to maintain the divisions ability to operate in the largest number of foreign languages as well as to provide against attrition of personnel, especially in the rarer language category.

 $\underline{S}-\underline{E}-\underline{C}-\underline{R}-\underline{E}-\underline{T}$ 

- 2. Action Planned on Long-term or Continuing Objectives
- a. More exact determination of what consumers need in the way of exploitation of foreign-language publications. This will be achieved through deliberation and discussions in the Subcommittee for Exploitation of Foreign-Language Publications, the recommendations of which will then be implemented following their approval by the Advasory Committee on Foreign-Language Publications. Implementation of such recommendations may require, in some cases, revision of techniques and reporting methods, and adoption of new operational procedures.
- b. Greater endeavor to achieve the closest possible coordination of activities in the other government agencies involved in exploitation of foreign-language publications. This will involve a cross-exchange of information among such agencies to the end that none are involved in the deplication of the efforts of another, that that operations are adjusting iffer to the best service of the requirements of the intelligence community.
- c. Development of specific reference aids such as annotated bibliographies or abstracts of publications urgently needed by consuming offices. Steps have already been taken in preparing such material, and immediate expansion is planaed in the field for the Far East area.
- d. Continued development of the CTS operation, both by expansion and increased coordination, especially with similar operations outside the IAC. The CTS is now operated with a minimum of personnel in view of its expansion in 1953, but steps will be taken to step up this unit's liaison activity and provide for picking up known backlogs of thus-far unlisted translations known to exist in the government agencies and elsewhere. Study must be pursued to determine the extent of duplication listing in relation to other translation indexing agencies, especially in the scientific and technical field. This many agencies result in the eliminating, or limiting, FDD/CTS listing of unclassified material in this field.
